

Automotive Service Technology

Program Description

This program prepares students to become state-of-the-art automotive technicians who can analyze, repair and maintain high-tech automobiles to manufacturer's specifications. Automotive Technology uses a computer managed laboratory and actual "live" hands-on work to train the automotive technicians of the future. The course of study takes students through brakes, suspension and steering, engine performance and repair, automatic and manual transmissions, drivelines, electrical systems, and air conditioning systems. Students are prepared to take A.S.E. certification tests which can be a condition of employment and enables employers to offer better starting salaries. The instructors are A.S.E. Master Certified.
